I use a little program called **POPit**. Not only does it dial up my ISP to check for ma at regular intervals (then hang up), but it automatically scans for known spammers and deletes them. If a new one comes up, all you need to do is hit the **spam** button. It sends a message to the spammer telling him he is breaking the law, then sends a message to the domain administrator with all the pertinent information they need to try and stop it, then deletes the **spam**. I used to get a ton of **spam** before I got this program, now get very little.

The program is easily downloaded at

<http://www.pro-pro.com/popit.htm>

It is considered Shareware. You can try it out for a month and, if you decide to keep it, it will cost you \$10.00. Pretty cheap for all that you get. Automatic mail checking and automatic **spam** frying.

PRODUCTIVE PROGRAMMING INC.

Introduction

POPit (pop-it) is an easy to use Windows 95 and NT 4.0 mail program which sends and receives messages for multiple mailboxes and improves your mail system with some much needed features. POPit is small and uses the system Taskbar tray to display a separate icon indicating the number of received messages for each maildrop (up to 10) that is automatically monitored. The concise and intuitive configuration screen makes for a quick setup and allows each mailbox profile to be configured independently. Dial-Up Networking support will dial your provider, retrieve mail headers and hang-up automatically! Any combination of audible, visual or program-launch notifications can be configured to occur when new mail is received. A single click of a POPit icon brings up the informative *InstaScan*™ interface that displays the mailbox headers for instant message information. *InstaView*™ allows you to instantly view, save, print and delete any message. MIME compliant attachments and URL addresses are automatically decoded and listed for you to easily launch. *SPAM-X*™ is a built in Anti-SPAM tool that allows POPit to filter out SPAM junk mail and take corrective action whenever any is received. You can use *InstaReply*™ to reply to a message or *InstaNote*™ to send a quick note instantly (including attachment) without loading your memory hungry mail program. So highly configurable and simple to use you may not need another mail client! PLUS many MORE features, a 30 day FREE evaluation and FREE upgrades (new enhancements added monthly)!

Please be sure to download the latest version!

Download POPit Version 1.82 Shareware Release FREE for 30 days.
